## Pelagic and Coastal Ecosystems mission

**Disclaimer:** The material presented here does not represent any official view of NASA or PACE mission management regarding the goals or approaches of the PACE mission. This material summarizes recommendations from the PACE Science Definition Team (SDT). Some, all, or none of these recommendations may be adopted by NASA for developing the official scope and objectives of the PACE mission and for preparing an Announcement of Opportunity (AO). All of the material presented here is described in detail (~250 pages) in the publically-available SDT report, which is open for comment during the month of August.

# Overarching Science Questions

*PaCE*

Pelagic and Coastal Ecosystems mission

- What are the standing **stocks, compositions, and productivity** of ocean ecosystems? How and why are they changing?
- How and why are ocean **biogeochemical cycles** changing? How do they influence the Earth system?

- What are the **material exchanges** between land and ocean? How do they influence **coastal ecosystems** and biogeochemistry? How are they changing?

- How do **aerosols** influence ocean ecosystems and biogeochemical cycles? How do ocean **biological and photochemical processes** affect the atmosphere?

- How do **physical ocean** processes affect ocean ecosystems and biogeochemistry? How do ocean biological processes influence ocean physics?
- What is the distribution of both harmful and beneficial **algal blooms** and how is their appearance and demise related to **environmental forcings**? How are these events changing?

- How do changes in critical ocean ecosystem services affect **human health and welfare**? How do **human activities** affect ocean ecosystems and the services they provide? What science-based **management** strategies need to be implemented to sustain our health and well-being?

# Approach

## ***SQ-1 Ocean Ecosystems:***

- Quantify phytoplankton biomass, pigments, and optical properties
- Assess key phytoplankton groups (e.g., calcifiers, nitrogen fixers, carbon export)
- Estimate particle size distribution and productivity using bio-optical modeling, chlorophyll fluorescence, and ancillary data on ocean physical properties (e.g., SST, MLD, etc.)
- Validate retrievals from pelagic to near-shore environments

## ***SQ-2 Ocean Biogeochemical Cycles:***

- Quantify phytoplankton biomass, functional groups, POC, PIC, DOC, PSD and productivity
- Validate retrievals from pelagic to near-shore environments.
- Assimilate observations in biogeochemical models to assess key properties (e.g., air-sea CO<sub>2</sub> flux, export)

## ***SQ-3 Land-Ocean Interactions:***

- Quantify concentrations and physical/optical properties of particles & dissolved material
- Validate retrievals from coastal to estuarine environments.
- Compare observables with ground-based and model-based land-ocean exchange in the coastal zone, physical properties (e.g., winds, SST, SSH, etc), and circulation.

## ***SQ-4 Atmosphere-Ocean Interactions:***

- Quantify ocean photobiochemical and photobiological processes and atmospheric aerosols
- Combine ocean and atmosphere observables with models and other remotely retrieved fields (e.g. temperature and wind speed) to evaluate (1) air-sea exchange of particulates, dissolved materials, and gases and (2) impacts on aerosol, cloud, and biological properties
- Validate retrievals from pelagic to near-shore environments

# Approach (cont.)

## ***SQ-5 Bio-physical Interactions:***

- Compare observed ecosystem properties with measured physical ocean properties (e.g., winds, SST, SSH, OOI assets) and model-derived physical fields (e.g., ML dynamics, horizontal divergence)
- Estimate ocean radiant heating and assess feedbacks
- Validate from pelagic to near-shore environments

## ***SQ-6 Algal Blooms and Consequences:***

- Measure biomass, pigments, and abundance of key phytoplankton groups, including harmful algae
- Quantify bloom magnitudes, durations, and distributions
- Assess inter-seasonal and inter-annual variations
- Compare variability to changing environmental/physical properties
- Validate retrievals from pelagic to near-shore environments

## ***SQ-7: Human Dimensions:***

- Establish close linkages between science, operational, and resource management communities early in the planning phases of PACE and maintain feedbacks throughout mission life.
- Engage management and operational communities fully in science planning efforts
- Estimate the social and economic impacts of ocean ecology, including biodiversity, biogeochemical processes, and biological and chemical stocks and fluxes
- Understand the applications of PACE products for water quality assessments and pollution identification.
- Implement strong education and capacity building programs addressing national & international needs.

# Targeted Ocean Retrievals

- Normalized water-leaving radiances
- Chlorophyll-a
- Diffuse attenuation coefficient (490 nm)
- Inherent optical properties
- Spectral  $K_d$
- Euphotic depth
- Spectral remote sensing reflectance
- Particulate organic carbon concentration
- Primary production
- Calcite concentration
- Colored dissolved organic matter
- Photosynthetically available radiation
- Fluorescence line height
- Total suspended matter
- Trichodesmium concentration
- Particle size distributions & composition
- Phytoplankton carbon
- Dissolved organic matter/carbon
- Physiological properties
- Phytoplankton pigment absorption spectra
- Export production
- Functional/Taxonomic groups

## GEOPHYSICAL PARAMETERS

Geophysical Parameter	Baseline Range	Threshold Range	Comments
<b>Remote sensing reflectance (Rrs)</b>	Rrs(340) 0.0015 - 0.020 sr <sup>-1</sup> Rrs(380) 0.0017 - 0.020 sr <sup>-1</sup> Rrs(412) 0.0011 - 0.033 sr <sup>-1</sup> Rrs(443) 0.0016 - 0.024 sr <sup>-1</sup> Rrs(490) 0.0023 - 0.014 sr <sup>-1</sup> Rrs(510) 0.0026 - 0.011 sr <sup>-1</sup> Rrs(531) 0.0021 - 0.010 sr <sup>-1</sup> Rrs(547) 0.0014 - 0.008 sr <sup>-1</sup> Rrs(555) 0.0011 - 0.008 sr <sup>-1</sup> Rrs(670) 0.0001 - 0.002 sr <sup>-1</sup> Rrs(683) 0.0000 - 0.012 sr <sup>-1</sup>	Rrs(340) 0.0020 - 0.015 sr <sup>-1</sup> Rrs(380) 0.0030 - 0.017 sr <sup>-1</sup> Rrs(412) 0.0035 - 0.028 sr <sup>-1</sup> Rrs(443) 0.0038 - 0.021 sr <sup>-1</sup> Rrs(490) 0.0042 - 0.012 sr <sup>-1</sup> Rrs(510) 0.0036 - 0.008 sr <sup>-1</sup> Rrs(531) 0.0027 - 0.006 sr <sup>-1</sup> Rrs(547) 0.0014 - 0.005 sr <sup>-1</sup> Rrs(555) 0.0011 - 0.003 sr <sup>-1</sup> Rrs(670) 0.0001 - 0.002 sr <sup>-1</sup> Rrs(683) 0.0000 - 0.001 sr <sup>-1</sup>	Ranges in the 412-678 nm region are based on the SeaWiFS and MODIS-AQUA data. Ranges at 340, 380 and 683 nm are based on field measurements from a variety of oceanic and coastal stations (n > 1,000) extracted from the NASA SeaWiFS archive.
<b>Inherent optical properties</b>			
<b>Absorption coefficients</b>			
- total absorption (a)	a(412) 0.020 - 2.0 m <sup>-1</sup> a(443) 0.020 - 1.8 m <sup>-1</sup> a(490) 0.065 - 1.0 m <sup>-1</sup> a(510) 0.040 - 0.6 m <sup>-1</sup> a(543) 0.000 - 0.6 m <sup>-1</sup> a(555) 0.003 - 1.2 m <sup>-1</sup> a(670) 0.000 - 0.02 m <sup>-1</sup>	a(412) 0.03 - 0.8 m <sup>-1</sup> a(443) 0.03 - 0.7 m <sup>-1</sup> a(490) 0.06 - 1.0 m <sup>-1</sup> a(510) 0.04 - 0.5 m <sup>-1</sup> a(543) 0.001 - 0.3 m <sup>-1</sup> a(555) 0.007 - 0.7 m <sup>-1</sup> a(670) 0.000 - 0.02 m <sup>-1</sup>	Specific values, 10 and 80 m depth, are based on data from the POCAL (PILZ-SeaWiFS) cruise, which was conducted in the North Atlantic Ocean (NOMAD data (Mannino et al. 2008, Nelson et al. 2010)). BIOSOP data from the ultra-oligotrophic South Pacific gyre were used in assessing lower limits of baseline ranges (Claret et al., 2008; Bricaud et al., 2010).
- phytoplankton absorption (a <sub>ph</sub> )	a <sub>ph</sub> (443) 0.003 - 1.2 m <sup>-1</sup> a <sub>ph</sub> (490) 0.000 - 0.6 m <sup>-1</sup> a <sub>ph</sub> (510) 0.000 - 0.6 m <sup>-1</sup> a <sub>ph</sub> (543) 0.000 - 0.6 m <sup>-1</sup> a <sub>ph</sub> (555) 0.003 - 1.2 m <sup>-1</sup> a <sub>ph</sub> (670) 0.000 - 0.02 m <sup>-1</sup>	a <sub>ph</sub> (443) 0.007 - 0.7 m <sup>-1</sup> a <sub>ph</sub> (490) 0.001 - 0.3 m <sup>-1</sup> a <sub>ph</sub> (510) 0.001 - 0.3 m <sup>-1</sup> a <sub>ph</sub> (543) 0.001 - 0.3 m <sup>-1</sup> a <sub>ph</sub> (555) 0.007 - 0.7 m <sup>-1</sup> a <sub>ph</sub> (670) 0.000 - 0.02 m <sup>-1</sup>	Specific values, 10 and 80 m depth, are based on data from the POCAL (PILZ-SeaWiFS) cruise, which was conducted in the North Atlantic Ocean (NOMAD data (Mannino et al. 2008, Nelson et al. 2010)). BIOSOP data from the ultra-oligotrophic South Pacific gyre were used in assessing lower limits of baseline ranges (Claret et al., 2008; Bricaud et al., 2010).
- detrital absorption (a <sub>d</sub> )	a <sub>d</sub> (443) 0.003 - 1.2 m <sup>-1</sup> a <sub>d</sub> (490) 0.000 - 0.6 m <sup>-1</sup> a <sub>d</sub> (510) 0.000 - 0.6 m <sup>-1</sup> a <sub>d</sub> (543) 0.000 - 0.6 m <sup>-1</sup> a <sub>d</sub> (555) 0.003 - 1.2 m <sup>-1</sup> a <sub>d</sub> (670) 0.000 - 0.02 m <sup>-1</sup>	a <sub>d</sub> (443) 0.007 - 0.7 m <sup>-1</sup> a <sub>d</sub> (490) 0.001 - 0.3 m <sup>-1</sup> a <sub>d</sub> (510) 0.001 - 0.3 m <sup>-1</sup> a <sub>d</sub> (543) 0.001 - 0.3 m <sup>-1</sup> a <sub>d</sub> (555) 0.007 - 0.7 m <sup>-1</sup> a <sub>d</sub> (670) 0.000 - 0.02 m <sup>-1</sup>	Specific values, 10 and 80 m depth, are based on data from the POCAL (PILZ-SeaWiFS) cruise, which was conducted in the North Atlantic Ocean (NOMAD data (Mannino et al. 2008, Nelson et al. 2010)). BIOSOP data from the ultra-oligotrophic South Pacific gyre were used in assessing lower limits of baseline ranges (Claret et al., 2008; Bricaud et al., 2010).
- colored dissolved organic material absorption (a <sub>CDOM</sub> )	a <sub>CDOM</sub> (443) 0.003 - 1.2 m <sup>-1</sup> a <sub>CDOM</sub> (490) 0.000 - 0.6 m <sup>-1</sup> a <sub>CDOM</sub> (510) 0.000 - 0.6 m <sup>-1</sup> a <sub>CDOM</sub> (543) 0.000 - 0.6 m <sup>-1</sup> a <sub>CDOM</sub> (555) 0.003 - 1.2 m <sup>-1</sup> a <sub>CDOM</sub> (670) 0.000 - 0.02 m <sup>-1</sup>	a <sub>CDOM</sub> (443) 0.007 - 0.7 m <sup>-1</sup> a <sub>CDOM</sub> (490) 0.001 - 0.3 m <sup>-1</sup> a <sub>CDOM</sub> (510) 0.001 - 0.3 m <sup>-1</sup> a <sub>CDOM</sub> (543) 0.001 - 0.3 m <sup>-1</sup> a <sub>CDOM</sub> (555) 0.007 - 0.7 m <sup>-1</sup> a <sub>CDOM</sub> (670) 0.000 - 0.02 m <sup>-1</sup>	Specific values, 10 and 80 m depth, are based on data from the POCAL (PILZ-SeaWiFS) cruise, which was conducted in the North Atlantic Ocean (NOMAD data (Mannino et al. 2008, Nelson et al. 2010)). BIOSOP data from the ultra-oligotrophic South Pacific gyre were used in assessing lower limits of baseline ranges (Claret et al., 2008; Bricaud et al., 2010).
<b>Backscatter coefficient (bb)</b>	bb <sub>443</sub> (443) 0.0003 - 0.1 m <sup>-1</sup>	bb <sub>443</sub> (443) 0.001 - 0.003 m <sup>-1</sup>	bb <sub>443</sub> (443) values are based on the GSM (Mantoura et al. 2002) and QAA (Lee et al. 2002) inversion models applied to MODIS L3 data.
<b>Beam attenuation (c)</b>	c(412) 0.03 - 10.0 m <sup>-1</sup> c(443) 0.03 - 10.0 m <sup>-1</sup> c(555) 0.08 - 10.0 m <sup>-1</sup>	c(412) 0.1 - 0.5 m <sup>-1</sup> c(443) 0.1 - 0.5 m <sup>-1</sup> c(555) 0.1 - 0.5 m <sup>-1</sup>	Specific values, 10 and 80 m depth, are based on data from the POCAL (PILZ-SeaWiFS) cruise, which was conducted in the North Atlantic Ocean (NOMAD data (Mannino et al. 2008, Nelson et al. 2010)). BIOSOP data from the ultra-oligotrophic South Pacific gyre were used in assessing lower limits of baseline ranges (Claret et al., 2008; Bricaud et al., 2010).
<b>Suspended Particulate Matter concentration (SPM)</b>	25 - 70,000 mg m <sup>-3</sup>	45 - 15,000 mg m <sup>-3</sup>	Values based on 271 field measurements from ultra-oligotrophic to turbid coastal waters.
<b>Fluorescence Quantum Yield (FQY)</b>	0.0003 - 0.05 fluoresced photons (absorbed photons) <sup>-1</sup>	0.001 - 0.02 fluoresced photons (absorbed photons) <sup>-1</sup>	Values based on MODIS L3 data following Behrenfeld et al. (2009), which includes a correction for non-photochemical quenching that reduces FQY values at low light.

# Targeted Ocean Retrievals

Pelagic and Coastal Ecosystems mission

Measurement Class	Geophysical Parameters
Core Optical Variables	
radiometric quantities	$L_u(z, \lambda)$ , $L_i(\lambda)$ , $L_{sky}(\lambda)$ , $E_d(z, \lambda)$ , $E_s(\lambda)$ , $PAR(z)$
apparent optical properties (AOPs)	$K_d(\lambda)$ , $K_{PAR}$ , $Z_{eu}$
inherent optical properties (IOPs)	$a(z, \lambda)$ , $a_p(z, \lambda)$ , $a_{ph}(z, \lambda)$ , $a_d(z, \lambda)$ , $a_{CDOM}(z, \lambda)$ , $b_b(z, \lambda)$ , $c(z, \lambda)$
Biogeochemical State Variables & Processes (Secondary Variables)	
phytoplankton pigment concentrations	Chl, accessory pigments, carotenoids, etc.
phytoplankton characteristics	$C_{phyto}$ , taxonomic/functional groups, chlorophyll fluorescence
particle population characteristics	SPM, POC, PIC, PSDs, $\beta(z, \lambda)$
photobiochemical characteristics	DOC, CDOM fluorescence, MAAs, phycobili proteins
production	NPP, NCP, nutrients
Synthesis & Modeling Variables (Tertiary Variables)	
Fluxes & ecosystems	C export, air-sea $CO_2$ exchange, land-ocean material exchange

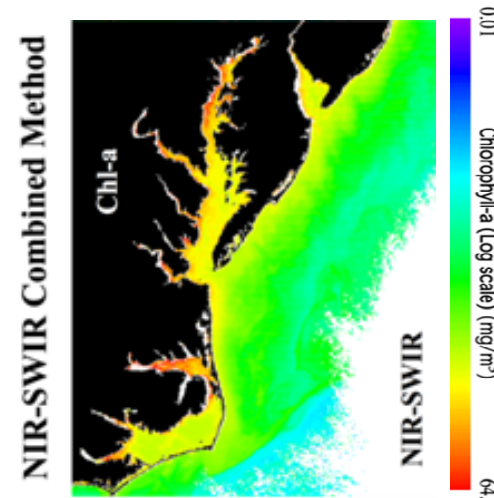

# Measurement Requirements

- ATMOSPHERIC CORRECTIONS

- Spectral anchoring with UV band (~350 nm)
- Open ocean bands in NIR [748 (10 nm bw), 820 (15 nm), 865 (40 nm)]
- Turbid water SWIR [1230 (20 nm), 1640 (40 nm), 2130 (50 nm)]

- This is one of the important areas of overlap between PACE aerosol and ocean science communities

# Measurement Requirements

- ATMOSPHERIC CORRECTIONS

- Spectral anchoring with UV band (~350 nm)
- Open ocean bands in NIR [748 (10 nm bw), 820 (15 nm), 865 (40 nm)]
- Turbid water SWIR [1230 (20 nm), 1640 (40 nm), 2130 (50 nm)]

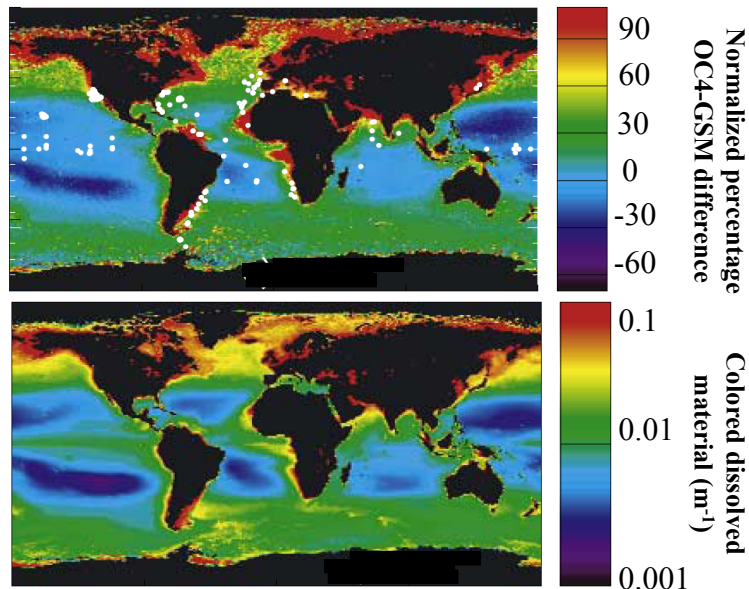

- This is one of the important areas of overlap between PACE aerosol and ocean science communities

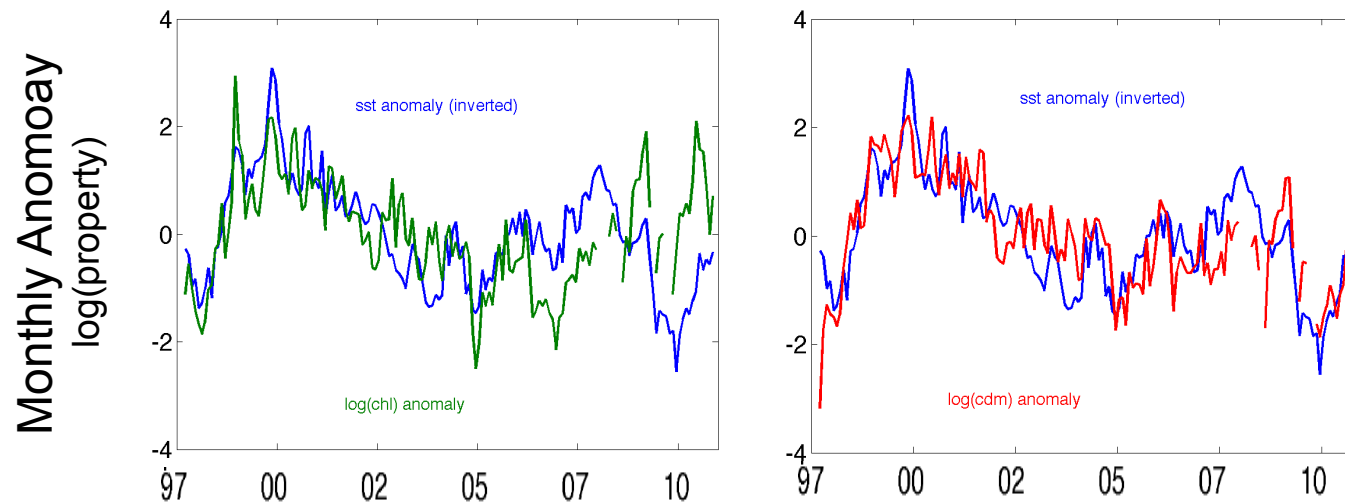

# Measurement Requirements

- ATMOSPHERIC CORRECTIONS
- CDOM / SEPARATION FROM PIGMENT ABSORPTION
  - Current uncertainty impacts NPP assessment by  $16 \text{ Gt y}^{-1}$  (total  $\sim 50 \text{ Gt y}^{-1}$ )
  - Near UV bands [360 (15 nm), 380 (15 nm)]

# Measurement Requirements

- ATMOSPHERIC CORRECTIONS
- CDOM / SEPARATION FROM PIGMENT ABSORPTION
  - Current uncertainty impacts NPP assessment by 16 Gt y<sup>-1</sup> (total ~50 Gt y<sup>-1</sup>)
  - Near UV bands [360 (15 nm), 380 (15 nm)]

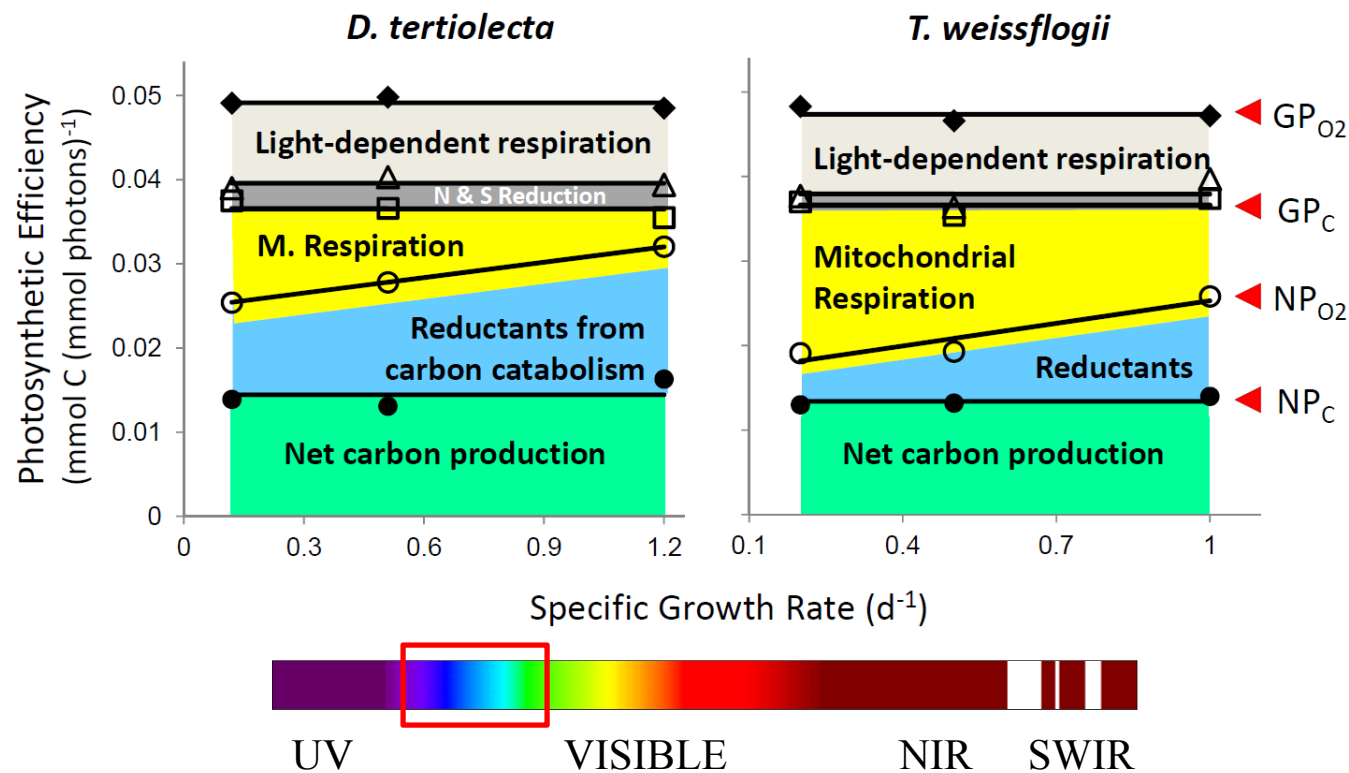

# Measurement Requirements

- ATMOSPHERIC CORRECTIONS
- CDOM-PIGMENT SEPARATION
- PHYTOPLANKTON ABSORPTION SPECTRA
  - Productivity keyed to total pigment absorption, not simply chlorophyll concentration
  - Assess both the amplitude and breadth of absorption spectra
  - 15 nm resolution in blue-green region

# Measurement Requirements

- ATMOSPHERIC CORRECTIONS
- CDOM-PIGMENT SEPARATION
- PHYTOPLANKTON ABSORPTION SPECTRA
  - Productivity keyed to total pigment absorption, not simply chlorophyll concentration
  - Assess both the amplitude and breadth of absorption spectra
  - 15 nm resolution in blue-green region

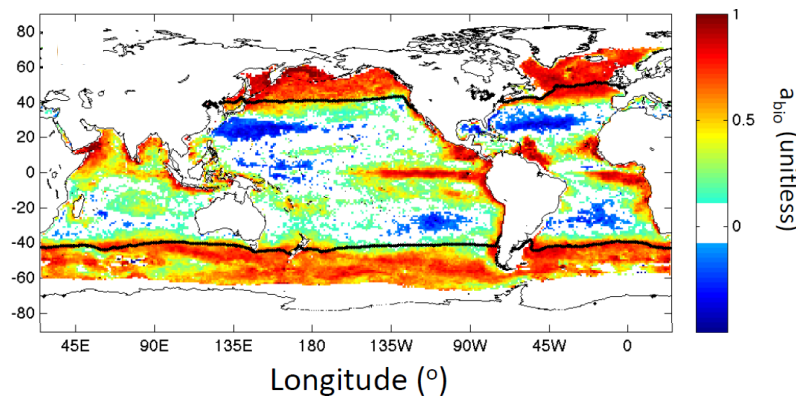

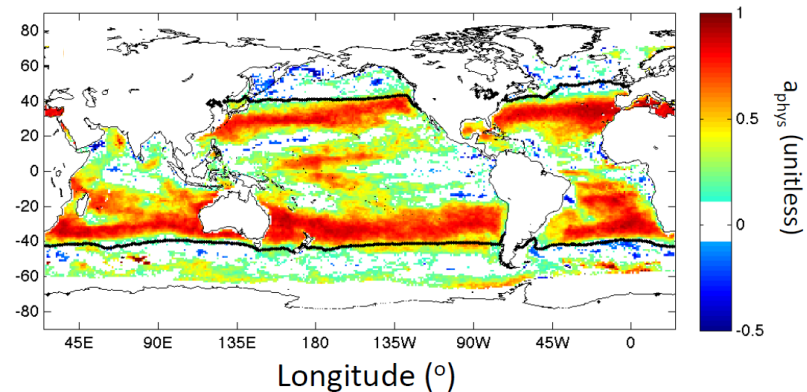

# Measurement Requirements

- ATMOSPHERIC CORRECTIONS
- CDOM-PIGMENT SEPARATION
- PHYTOPLANKTON ABSORPTION SPECTRA
- PHYTOPLANKTON CARBON; TOTAL PARTICULATE CARBON
  - Chlorophyll is not biomass
  - Carbon stocks related to particulate scattering coefficients *and* spectral slope
  - 15 nm bands in the region of minimum pigment absorption

SeaWiFS chlorophyll variability due to biomass

SeaWiFS chlorophyll variability due to physiology

# Measurement Requirements

- ATMOSPHERIC CORRECTIONS
- CDOM-PIGMENT SEPARATION
- PHYTOPLANKTON ABSORPTION SPECTRA
- PHYTOPLANKTON CARBON; TOTAL PARTICULATE CARBON
  - Chlorophyll is not biomass
  - Carbon stocks related to particulate scattering coefficients *and* spectral slope
  - 15 nm bands in the region of minimum pigment absorption

# Measurement Requirements

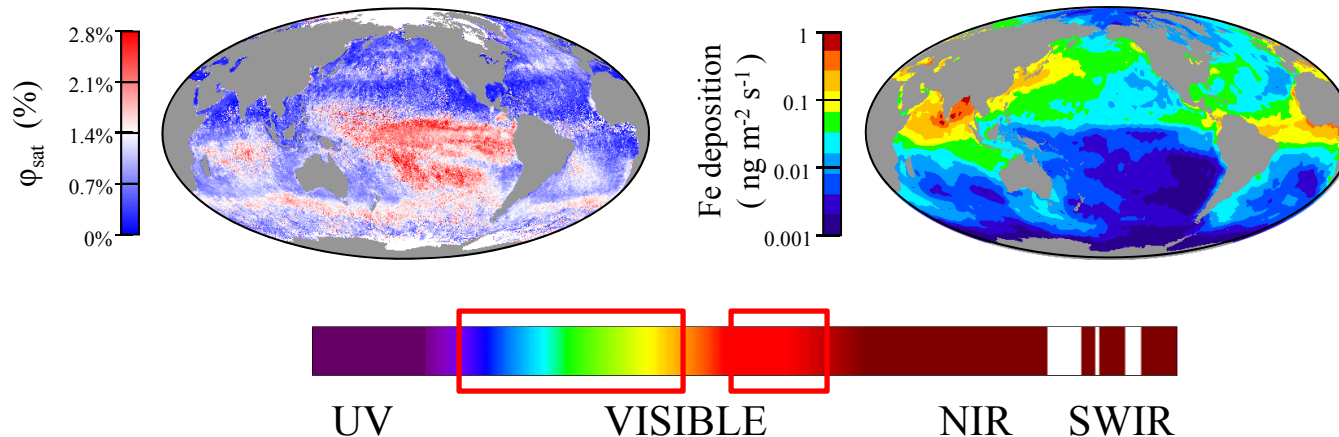

- ATMOSPHERIC CORRECTIONS
- CDOM-PIGMENT SEPARATION
- PHYTOPLANKTON ABSORPTION SPECTRA
- PHYTOPLANKTON CARBON; TOTAL PARTICULATE CARBON
  - Chlorophyll is not biomass
  - Carbon stocks related to particulate scattering coefficients *and* spectral slope
  - 15 nm bands in the region of minimum pigment absorption

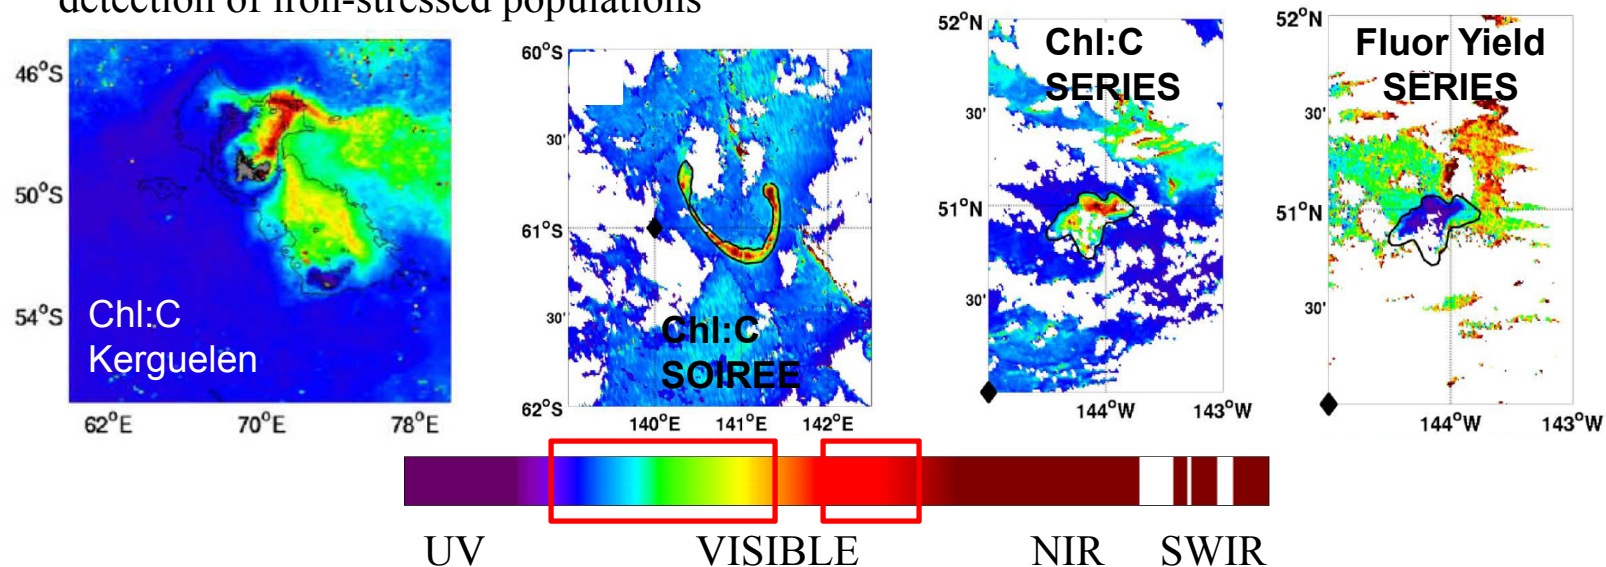

# Measurement Requirements

- ATMOSPHERIC CORRECTIONS
- CDOM-PIGMENT SEPARATION
- PHYTOPLANKTON ABSORPTION SPECTRA
- PHYTOPLANKTON/TOTAL PARTICULATE CARBON
- PHYTOPLANKTON PHYSIOLOGY
  - How do we interpret observed chlorophyll trends?
  - How do we account for unique nutrient effects?
  - What are the ecological responses to atmospheric nutrient deposition?
  - Ratio of pigment absorption to phytoplankton carbon - general light and nutrient effects
  - Chlorophyll fluorescence quantum yield [665 (10 nm), 678 (10 nm), 710 (15 nm)] – detection of iron-stressed populations

# Measurement Requirements

- ATMOSPHERIC CORRECTIONS
- CDOM-PIGMENT SEPARATION

## Seven Focused Ocean Science Questions

# PACE Threshold-mission Ocean Science Traceability Matrix (STM)

Science Questions	Approach	Maps to Science Question	Measurement Requirements	Platform Requirements	Other Needs
<b>1</b> What coastal ocean will be the most important for understanding and biogeochemistry? How are they changing?	<b>Ocean Spectrometer</b> <ul style="list-style-type: none"> <li>• UV/Vis high spectral resolution</li> <li>• Fluorescence capability</li> <li>• NIR &amp; SWIR bands</li> <li>• Sensor tilt</li> <li>• Climate quality data focus</li> </ul>	1	<ul style="list-style-type: none"> <li>• water leaving radiance at 5 nm resolution from 355 to 800 nm</li> <li>• 10 to 40 nm wide atmospheric correction bands at 350, 865, 1240, 1640, &amp; 2130 nm, plus one additional NIR band</li> <li>• characterization of instrument performance changes to <math>\pm 0.5\%</math> in first 3 years &amp; for remaining duration of the mission</li> <li>• monthly characterization of instrument spectral shift to 0.3 nm accuracy</li> <li>• daily measurement of dark current &amp; a calibration target/source with its degradation known to <math>\sim 0.2\%</math></li> <li>• Prelaunch characterization of linearity, RVVA, polarization sensitivity, radiometric &amp; spectral temperature sensitivity, high contrast resolution, saturation, saturation recovery, crosstalk, radiometric band-to-band stability, bidirectional reflectance distribution, &amp; relative spectral response</li> <li>• overall instrument artifact contribution to TOA radiance of <math>&lt; 0.5\%</math></li> <li>• characterization &amp; correction for image striping to noise levels or below</li> <li>• crosstalk contribution to radiance uncertainties of 0.1% at <math>L_{typ}</math></li> <li>• polarization sensitivity <math>\leq 1\%</math></li> </ul>	2-day global coverage to solar zenith angle of $75^\circ$  Sun-synchronous polar orbit with equatorial crossing time between 11:00 and 1:00  Maintain orbit to $\pm 10$ minutes over mission lifetime  Mitigation of sun glint  Mission lifetime of 5 years	Capability to reprocess full data set 1 – 2 times annually  <i>Ancillary data sets from models, missions, or field observations:</i>  <b>Measurement Requirements</b>
<b>2</b> How do aerosols influence ecosystems & biogeochemical cycles? How do ocean & photochemical processes influence the atmosphere?	Estimate particle abundance, size distribution (PSD), & composition	1, 3	<ul style="list-style-type: none"> <li>• knowledge of polarization sensitivity to <math>\leq 0.2\%</math></li> <li>• detector saturation for any science measurement bands at <math>L_{max}</math></li> <li>• RVVA of <math>&lt; 5\%</math> for entire view angle range &amp; <math>&lt; 0.5\%</math> for view angles greater by less than <math>1^\circ</math></li> <li>• stray light contamination <math>&lt; 0.2\%</math> of <math>L_{typ}</math> 3 pixels away from a cloud</li> <li>• Out-of-band contamination <math>&lt; 0.01</math> for all multispectral channels</li> <li>• Radiance-to-counts characterized to 0.1% over full dynamic range</li> </ul>	Storage and download of full spectral and spatial data  Monthly lunar observations at constant phase angle through Earth observing port	(1) Ozone (2) Water vapor (3) Surface wind velocity and barometric pressure (4) $NO_2$
<b>3</b> How do physical ocean processes affect ocean ecosystems & biogeochemistry? How do ocean biological processes influence ocean physics?	Carbon export, pH, etc.)	1, 3	<ul style="list-style-type: none"> <li>• Radiance-to-counts characterized to 0.1% over full dynamic range</li> <li>• Spatial resolution of 1 km x 1 km (<math>\pm 0.1</math> km) along-track</li> <li>• Spatial resolution at high latitudes exceeding <math>\pm 60^\circ</math></li> </ul>	Pointing accuracy of $0.2^\circ$ over full range of viewing geometries, with knowledge to $0.01^\circ$	<b>Science Requirements</b>
<b>4</b> How do physical ocean processes affect ocean ecosystems & biogeochemistry? How do ocean biological processes influence ocean physics?	(e.g., winds, SST, SSH), and circulation (ML dynamics, horizontal divergence, etc)	6	<ul style="list-style-type: none"> <li>• Standard marine atmosphere, clear-water <math>[r_w(I)]_N</math> retrieval with accuracy of <math>\max[5\%, 0.001]</math> over the wavelength range 400 – 710 nm</li> <li>• SNR at <math>L_{typ}</math> for 1 km<sup>2</sup> aggregate bands of 1000 from 360 to 710 nm; 300 @ 350 nm; 600 @ NIR bands; 250, 180, and 50 @ 1240, 1640, &amp; 2130 nm</li> </ul>	Pointing jitter of $0.001^\circ$ between adjacent scans or image rows  Spatial band-to-band registration of 80% of one IFOV between any two bands, without resampling	(1) SST (2) SSH (3) PAR (4) UV (5) MLD (6) $CO_2$ (7) pH (8) Ocean circulation (9) Aerosol deposition (10) run-off loading in coastal zone
<b>5</b> What is the distribution of both harmful and beneficial algal blooms and how is their appearance and demise related to environmental forcings? How are these events changing?	Combine PACE ocean & atmosphere observations with models to evaluate ecosystem-atmosphere interactions	4	<b>Implementation Requirements</b> <b>Vicarious Calibration:</b> Ground-based $R_{rs}$ data for evaluating post-launch instrument gains. Features: (1) Spectral range = 350 - 900 nm at $\leq 3$ nm resolution, (2) Spectral accuracies $\leq 5\%$ , (3) Spectral stability $\leq 1\%$ , (4) Deploy = 1 yr prelaunch through mission lifetime, (5) Gain standard errors to $\leq 0.2\%$ in 1 yr post-launch, (6) Maintenance & deploy centrally organized, & (7) Routine field campaigns to verify data quality & evaluate uncertainties <b>Product Validation:</b> Field radiometric & biogeochemical data over broad possible dynamic range to evaluate PACE science products. Features: (1) Competed & revolving Ocean Science Teams, (2) PACE-supported field campaigns (2 per year), (3) Permanent/public archive with all supporting data	Simultaneity of 0.02 second	
<b>6</b> How do changes in critical ocean ecosystem services affect human health and welfare? How do human activities affect ocean ecosystems and the services they provide? What science-based management strategies need to be implemented to sustain our health and well-being?	Assess ocean radiant heating and feedbacks	5	<b>Ocean Biogeochemistry-Ecosystem Modeling</b> <ul style="list-style-type: none"> <li>• Expand model capabilities by assimilating expanded PACE retrieved properties, such as NPP, IOPs, &amp; phytoplankton groups &amp; PSD's</li> <li>• Extend PACE science to key fluxes: e.g., export, <math>CO_2</math>, land-ocean exchange</li> </ul>		
<b>7</b> How do changes in critical ocean ecosystem services affect human health and welfare? How do human activities affect ocean ecosystems and the services they provide? What science-based management strategies need to be implemented to sustain our health and well-being?	Conduct field sea-truth measurements & modeling to validate retrievals from the pelagic to near-shore environments	1, 4, 2, 5, 3, 6			
	Link science, operational, & resource management communities. Communicate social, economic, & management impacts of PACE science. Implement strong education & capacity building programs.	7

health and welfare? How do human activities affect ocean... the pelagic to near-shore environments		3 6	<b>Implementation Requirements</b> <b>Vicarious Calibration:</b> Ground-based $R_{rs}$ data for evaluating post-launch instrument gains. Features: (1) Spectral range = 350 - 900 nm at $\leq 3$ nm resolution, (2) Spectral accuracies $\leq 5\%$ , (3) Spectral stability $\leq 1\%$ , (4) Deploy = 1 yr prelaunch through mission lifetime, (5) Gain standard errors to $\leq 0.2\%$ in 1 yr post-launch, (6) Maintenance & deploy centrally organized, & (7) Routine field campaigns to verify data quality & evaluate uncertainties <b>Product Validation:</b> Field radiometric & biogeochemical data over broad possible dynamic range to evaluate PACE science products. Features: (1) Competed & revolving Ocean Science Teams, (2) PACE-supported field campaigns (2 per year), (3) Permanent/public archive with all supporting data		
Models are essential for achieving PACE science objectives		7	<b>Ocean Biogeochemistry-Ecosystem Modeling</b> • Expand model capabilities by assimilating expanded PACE retrieved properties, such as NPP, IOPs, & phytoplankton groups & PSD's • Extend PACE science to key fluxes: e.g., export, CO <sub>2</sub> , land-ocean exchange		

Field validation and calibration, new measurements, process studies, and algorithm development are central to mission and thus required in flight project budget

Models are essential for achieving PACE science objectives

# Measurement Goals

**Accuracy:** Retrieval of normalized  $[r_w(\lambda)]_N$  for open-ocean, clear-water conditions and standard marine atmospheres with an accuracy of the maximum of either 10% or 0.002 over the wavelength range of 350 – 395 nm

**Aerosol heights:** Identified approach or measurement capacity for [evaluating/measuring aerosol vertical distributions and type](#) for improved atmospheric corrections.

**Atmospheric correction:** SWIR atmospheric correction band at 2130 nm with a SNR of 100.

**Coverage:** [1-day global coverage](#); Coverage to a solar zenith angle  $>75^\circ$

**Crossing time:** Noon equatorial crossing time ( $\pm 10$  min)

**Instrument artifact:** Overall instrument artifact contribution to TOA radiance retrievals of  $<0.2\%$ .

**Navigation and Registration:** pointing knowledge of 0.05 IFOV; band-to-band registration of 90% of one IFOV; simultaneity of 0.01 second

**Nitrogen dioxide:** Identified approach for characterizing  $\text{NO}_2$  and ozone concentrations at sufficient accuracy for improving atmospheric corrections

**Mission lifetime:** 10 years

**Performance changes:** Characterization of instrument performance changes to  $\pm 0.1\%$  within 3 years and maintenance of this accuracy thereafter

**Saturation:** No detector saturation for any science measurement bands up to  $1.2 \times L_{\max}$

**Signal-to-noise:** SNR for bio-optical science bands and/or atmospheric correction bands [greater than those specified for mission threshold](#) requirements

**Spatial resolution:** Spatial resolution of  $1 \text{ km}^2$  ( $\pm 10\%$ ) at all scan angles; Along-track spatial resolution of [250 m x 250 m to 500 m x 500 m](#) for inland, estuarine, coastal, and shelf area retrievals for all bands or a subset of bands.

**Spectral coverage:** 5 nm spectral coverage from [800 to 900 nm](#)

**Spectral subsampling:**  $\sim 1\text{-}2$  nm resolution from 655 to 710 nm for [refined characterization of the chlorophyll fluorescence](#) spectrum

**Water vapor:** Spectral measurement band centered at 820 nm or 940 nm to determine water vapor content

# PACE

Pre-Aerosol, Cloud, ocean Ecosystem mission
