

Postdoctoral fellows in Marine Microbial Ecology and Biogeochemical Modeling:

The Levine lab at the University of Southern California is seeking two postdoctoral fellows to lead independent research. Position 1 will focus on understanding the guiding principles governing microbial ecosystem structure and function. This position is part of an interdisciplinary, international Simons Foundation Collaboration (www.primecollaboration.org). Position 2 will focus on understanding marine microbial evolution and the potential impacts on ocean biogeochemical cycling. Both projects will involve model development, calibration, validation, and hypothesis testing. Inquiries should be addressed to n.levine@usc.edu.

Dr. Naomi M. Levine
Gabilan Assistant Professor of Biological Sciences and Earth Sciences
University of Southern California
